KASANE / TABLE, Nendo

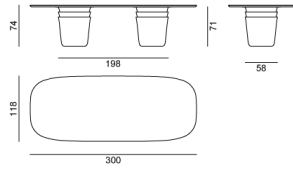

Bases structures are made of high-density thermoplastic polymer coated on the surface with a polymer resin, while the table top is marine plywood and covered with thin layer of clay. Thanks to the final texture, the articles express material nature and a pleasant tactile sensation.

Termoplastic polymer foam: High-density thermoplastic polymer, stiffened by a polymer resin. The surface finish, applied by hand, consists of a mix of sand and clay. A matt two-component polyurethane protective coating is added to the surface finish.
Marine plywood: This material is suitable for outdoor use. On the plywood tops, a surface finish consisting of a mix of sand and clay is added by hand, with a matt protective coating.
